

Distributed workforce. Always-ON.

A cost-effective, managed network access solution for remote employees.

Bring Teleworkers into your WAN – or create a private WAN specifically for them.

We now have a cost-effective WAN solution designed for small-to-midsize enterprises and those with teleworkers who, traditionally, VPN into your network.

This solution connects them to your WAN with whatever network access they have at their homes – no need to manage VPNs.

Features include:

- Ability to bond multiple Internet connections for needed bandwidth.
- Reliability with failover to mobile networks or other secondary internet connections.
- Hub and spoke WAN architecture for simple gateway management.
- Bi-Directional Quality of Service – customizable for inbound and/or outbound traffic.
- Separate WAN traffic from regular traffic.
